

XM radio is the best thing to happen to driving long distance since the map. The traffic and weather are indispensable. On a recent trip to Texas we used the weather to learn about current weather and most importantly we avoided slow traffic in Dallas with the instant traffic channel. I wish XM had local traffic in Richmond, it would really help. XM radio is a wonderful system that provides news and information that local radio stations do not, because local radio stations have DJs that talk more than inform and then they have to play advertisements to pay the bills. I pay for XM, so do over a million others and the subscribers should get what they want and need uninterrupted news, traffic and music. XM should not be limited by new laws to protect local radio stations that are not getting the job done. Consumer choice is one of America's greatest freedoms, please do not make any laws to curtail my freedom of choice and please do not change or limit my XM! Thank you, Randy Grigg
